HW5

1. Website organization methods

Answer: B

2. WCAG principles

Answer: B

3. Influenced by target audience

Answer : D

4. Images used for navigation

Answer: C

5. Opposite colors on the color wheel

Answer: B

6. Two Websites

I have chosen Amazon and Alibaba because both are online shopping websites with the same target audience.

Repetition: Both websites have used similar colors and designs on all their pages, making it easier for users to recognize patterns.

Contrast: Both websites have used contrasting colors for buttons such as “Add to Cart,” making it easy for users to spot them.

Proximity: Both websites have used proximity to display related information in close proximity to each other.

Alignment: Both websites have used a structured format for displaying content in rows and columns. Although Amazon’s website looks neater, Alibaba’s website provides more information on a single page.

Conclusion: Both websites have used design elements effectively, but Amazon’s website is

simple compared to Alibaba's website, which is more detailed.
